12 November 1964

MEMORANDUM FOR: Chief, Technical Intelligence Division, NPIC

ATTENTION : Chief, Technical Services Branch

SUBJECT : Collection of Examples of Stereo Convergence and
Angles of Oblivity

1. Examples of the range of black & white stereo convergences and of angles of obliquity available from existing in-house photography are needed to determine ranges of interest for Phase II collection and testing on Project DIMview. Emphasis for Phase II will be on collective P.I. Performance as a function of stereo and obliquity: we are in the process of selecting a range of values which will take into account the types of coverage with past, present and projected systems.

2. Because of its resources in this area, TID is requested to supply PADS with a listing of such coverage, consisting of: one high-quality vertical stereo pair and one pair for each angle of obliquity that each operational system has been used for. We are interested in a variety of representative operational systems, such as the A-2, B, KH-4, KH-6, KH-7, etc.

3. The listing should include all pertinent information for specifying and locating the suggested material: this will help expedite requests for photographic reproductions. The material should be accessible within NPIC.
